Objectives	Present technical skills in understandable format. A poster presentation is a way to communicate your research or your understanding of a topic in a concise and visually engaging format. Presentation objectives are the statements that describe what you want to achieve with your presentation. They are not the same as the topic, the agenda, or the content of your presentation. Rather, they are the outcomes that you want your audience to remember, feel, or do after listening to you.	
Outcomes	Provide undergraduate students with the opportunity to develop and refine their scientific communication skills. Give student participants constructive feedback on their poster design and verbal communication skills. Posters help learners to focus on a certain idea, event, fact or process. Posters are a convenient way for both students and teachers to help students understand the topics a lot faster. Pinning posters in a classroom, you influence students with constant learning, even if students are just looking around. Presenters use posters to entice audiences to: (1) read about their work, and (2) understand and remember the information presented.
