CHRONICLE OF HUMANITIES AND CULTURAL STUDIES

A BIMONTHLY REFEREED INTERNATIONAL JOURNAL

SPECIAL ISSUE

On the Occasion of One Day International Conference On

RECENT ADVANCES IN LANGUAGES, LITERATURE AND SOCIAL SCIENCES

17th February, 2018

(BOOK- 9)

Guest Editors

Dr. Chatrapati Pangarkar

Dr. Sachin Bhume

ORGANIZED BY
MGEWS

**CENTRE FOR HUMANITIES AND CULTURAL STUDIES,
KALYAN, DIST. THANE &**

**NEW MAN INTERNATIONAL JOURNAL OF
MULTI-DISCIPLINARY STUDIES, PARBHANI**

Scanned By KagazScanner

CONTENTS

1. Bollywood Notions of Gender: Disparity in Wages	Rupali B. Kulkarni	05
2. Music and Peaceful Meditation	Dr. Chatrapati B. Pangarkar	09
3. Folk Media and Rural Development in India	Dr. Manisha V. Mankar	11
4. Problems of Senior Citizen in Modern India....	Dr. Shirish V. Kadu	13
5. Role of NGOs in Environmental Management	Dr. Rajendra Gonarkar	17
6. Gender Inequality Index: Calculating Analysis	Dr. Pratibha G. Chavan	23
7. Diasporic Communities and Social Media	Y. L. Padme	27
8. Cyber Security and Global Technology Issues ...	K. S. Khobragade	31
9. Use of Social Media by Urban Indian Youth and its impact on...	Dr. Beedkar Sandhya D.	33
10. Sports training	Mr. Santosh Kumar Banjare	33
11. Significance of Spirituality and Cultural Values in...	Mr. Shalin Patel	33
12. Physical Inactivity and Health	Mr. Sashikant Bhagat	33
13. The Place of Rhythm in Indian Folk Music	Hemant T. Shinde	33
14. Learning and Perspective for Sustainable Development	Dr. Vandana Phatale	33
15. A Critical Appreciation of Child Malnutrition	Dr. Rajeshwar B. Deshmukh	33
16. Career in Political Science	Dr. Shirish V. Kadu	33
17. The Role of Population Density in Rural Transformations	Mohd Azhar Ud Din Malik	33
18. The Study of Changes in Sex Ratio	Mohammad Amin Malik	4
19. A Psychological Approach of Maryam Jameelah ...	Bhagwan S. Manal	4
20. Role of Environmental Education	Nirmal Ekanath Sitaram.	4
21. Effect of Social and cultural factors on women's health	Anand P. Pandit	5
22. Issues of National Security in India: China Threat	Balasaheb S. Murade	5
23. A World Food Day 2017" Volumetric Analysis of Food ...	Shinde A. Bhaskarrao	5
24. Women Agriculture Labour in India	Bushra Nahid Rahim Sayyed	6
25. Safety Laws In India: Status And Challenges	Ishwar Baburao Ghorade	6
26. Governance Tools In Public Administration and ...	Krti Sadhuroo Niralwad	6
27. Application of RFID Technology in Libraries.....	Dr. Anvita Agrawal	6
28. Application of RFID Technology in Libraries	Dr. Shekhar B. Ashtikar	6
29. Information Literacy: Concept, Category & Components	Sangharsha Baliram Sawale	7
30. LIB-MAN Software for Computerization of Academic	Dr. Nitin V. Gaikwad	7
31. Academic Anxiety among High School Students	Shraddha A. Vibhute	7
32. Library Automation of Shri Vyankatesh Arts Commerce	Hatkar Jalba Umaji	7
33. Economic Thought of Mahatma Gandhi	Memane S.M.	8
34. Application of GIS and Remote Sensing for Selection...	Memane S.M.	8
35. Monetary and Fiscal Policy Reforms in India	Mr. Kalyan D. Yadav	8
36. Urban Development Policy and Solid West Management	Dr. Sunil D. Belsare	8
37. The Role and Functions of Educational Agencies on the ...	Dr. Rajani Ramesh Senad	8
38. Coalition Politics in Indian Democracy- An Analysis	Dr. Umesh B. Deshmur	9
39. Effect of Faculty on Emotional maturity	Kamble Krushna Shivaji	9
40. Social Media: It's Effect on Youth and Society	Lagad Santosh Jabaji	9
41. Women Health In India	Dr. Bhakti Mahindrakar	9
42. Influence of Gender and Locale on Dowry Attitude	Neela Sangameshwar J.	10
43. Recent Trends in E-Commerce: An Empirical Study ...	Mr. Bhimappa Rangannavar	10
44. Role of Small Scale Entrepreneurs in Urban & Rural Development	Dr. Sunil V. Shinde	10
	Dr. Ramesh D. Waghmare	10
	Dr. Syed Tanvir Badruddin	10

Application of RFID Technology in Libraries: Advantages & Disadvantages

Prof. Memane S.M.
Librarian,
Annasaheb Awate College, Manchar

Introduction- RFID (Radio Frequency Identification) allows an item, for example a library book, to be tracked and communicated with by radio waves. This technology is similar in concept to a cellphone. RFID is a broad term for technologies that use radio waves to automatically identify people or objects. There are several methods of identification, but the most common is to store a serial number that identifies a person or object, and perhaps other information, on a microchip that is attached to an antenna (the chip and the antenna together are called an RFID transponder or an RFID tag). The antenna enables the chip to transmit the identification information to a reader. The reader converts the radio waves reflected back from the RFID tag into digital information that can then be passed on to computers that can make use of it.

RFID is one of the most technologies being adopted by both industry and academic world. Modern academic library is a place where millions of books advanced; periodicals, CDs, DVDs and other electronic reading materials are contained. It is a challenge to manage for librarians, managing such type of huge collection.

RFID technology is in use since the 1970s. RFID tags can be active, semi-passive and passive. It is a

small device that can store information. Passive tag don't have internal batteries. RFID reader is a device that can receive and transmit a radio signal. It is built to encode data stored in the tag's microprocessor. Because of the higher cost, active and semi-passive RFID tags are used for valuable asset tracking. The passive RFID tags are used in RFID library management systems.

RFID For Libraries – RFID can be used library circulation operations and theft detection systems. RFID-based systems move beyond security to become tracking systems that combine security with more efficient tracking of materials throughout the library, including easier and faster charge and discharge, inventorying, and materials handling (Boss 2004). This technology helps librarians reduce valuable staff time spent scanning barcodes while charging and discharging items. RFID is a combination of radio -frequency-based technology and microchip technology. The information contained on microchips in the tags affixed to library materials is read using radio frequency technology, regardless of item orientation or alignment (i.e., the technology does not require line-of-sight or a fixed plane to read tags as do traditional theft detection systems).

RFID LIBRARY MANAGEMENT SYSTEM –

Fig. No 1: RFID Library Management System

Application in RFID Library Management System

1. Book Drops: The Book Drops can be located anywhere, within or outside the library. Possible remote locations outside the library include MRT/train stations,

shopping centers, schools, etc. This offers unprecedented flexibility and convenience of returning library items at anytime of the day, even when the library is closed.

2. RFID Transponder or Tagging: It is the most important link in any RFID system. It has the ability to store information relating to the specific item to which they are attached, rewrite again without any requirement for contact or line of sight. Data within a tag may provide identification for an item, proof of ownership, original storage location, loan status and history.

RFID tags have been specifically designed to be affixed into library media, including books, CDs, DVDs and tapes.

3. Counter Station is a staff assisted station on services such as loan, return, tagging, sorting and etc. It is loaded with arming/disarming module, tagging module and sorting module. Arming/Disarming module allows EAS (Electronic Article Surveillance) bit inside the tag of the library material to be set/reset so as to trigger/not trigger the alarm of the EAS gate.

4. The Patron self check-out station: It is basically a computer with a touch screen and a built-in RFID reader, plus special software for personal identification, book and other media handling and circulation. After identifying the patron with a library ID card, a barcode card, or his personal ID number (PIN), the patron is asked to choose the next action (check-out of one or several books). After choosing check-out, the patron puts the book(s) in front of the screen on the RFID reader and the display will show the book title and its ID number (other optional information can be shown if desired) which have been checked out.

5. Shelf Management: This solution makes locating and identifying items on the shelves an easy task for librarians. It comprises basically of a portable scanner and a base station.

The solution is designed to cover three main requirements:

- Search for individual books requested
- Inventory check of the whole library stock
- Search for books which are miss-helved

6. Anti-theft Detection: RFID EAS Gates is the anti-theft part of the Library RFID Management System using the same RFID tags embedded in the library items. Each lane is able to track items of about 1 meter and would trigger the alarm system when an un-borrowed item passed through them. The alarm will sound and lights on the gate will flash as patron passes through with the un-borrowed library material

Components of an RFID system-

Tag-

The heart of the system is the RFID tag, which can be fixed inside a book's back cover or directly onto CDs and videos. This tag is equipped with a programmable chip and an antenna. Each paper-thin tag contains an engraved antenna and a microchip with a capacity of at least 64 bits. There are three types of tags: "read only", "WORM," and "read/write" (Boss 2003). "Tags are "read only" if the identification is encoded at the time of manufacture and not rewritable. "WORM" (Write-Once-Read-Many) tags are programmed by the using organization, but without the ability to rewrite them later. "Read/write tags," which are chosen by most libraries, can have information changed or added. In

libraries that use RFID, it is common to have part of the read/write tag secured against rewriting, e.g., the identification number of the item.

Reader-

RFID readers or receivers are composed of a radio frequency module, a control unit and an antenna to interrogate electronic tags via radio frequency (RF) communication (Sarma et al. 2002). The reader powers an antenna to generate an RF field. When a tag passes through the field, the information stored on the chip in the tag is interpreted by the reader and sent to the server, which, in turn, communicates with the integrated library system when the RFID system is interfaced with it (Boss 2004).

RFID exit gate sensors (readers) at exits are basically two types. One type reads the information on the tag(s) going by and communicates that information to a server. The server, after checking the circulation database, turns on an alarm if the material is not properly checked out. Another type relies on a "theft" byte in the tag that is turned on or off to show that the item has been charged or not, making it unnecessary to communicate with the circulation database.

Readers in RFID library are used in the following ways (Boss 2003):

- Conversion station: where library data is written to the tag
- Staff workstation at circulation: used to charge and discharge library materials
- Self check-out station: used to check out library materials without staff assistance
- Self check-in station: used to check in library materials without staff assistance
- Exit sensors: to verify that all material leaving the library has been checked out
- Book-drop reader: used to automatically discharge library materials and reactivate security
- Sorter and conveyor: automated system for returning material to proper area of library
- Hand-held reader: used for inventorying and verifying that material is shelved correctly.

Antenna-

The antenna produces radio signals to activate the tag and read and write data to it. Antennas are the channels between the tag and the reader, which controls the system's data acquisitions and communication. The electromagnetic field produced by an antenna can be constantly present when multiple tags are expected continually. Antennas can be built into a doorframe to receive tag data from person's things passing through the door.

Server-

The server is the heart of some comprehensive RFID systems. It is the communications gateway among the various components (Boss, 2004). It receives the information from one or more of the readers and exchanges information with the circulation database. Its software includes the SIP/SIP2 (Session Initiation Protocol), APIs (Applications Programming Interface) NCIP (National Circulation Interchange Protocol) or SLNP necessary to interface it with the integrated library software but no library vendor has yet fully implemented NCIP approved by NISO (Koppel, 2004). The server typically includes a transaction database so that reports can be produced.

Advantages of RFID in Libraries:**1. Rapid charging/discharging:**

The use of RFID reduces the amount of time required to perform circulation operations. The most significant time savings are attributable to the facts that information can be read from RFID tags much faster than from barcodes and that several items in a stack can be read at the same time. While initially unreliable, the anti-collision algorithm that allows an entire stack to be charged or discharged now appears to be working well.

2. Simplified patron self-charging/discharging:

For patrons using self-charging, there is a marked improvement because they do not have to carefully place materials within a designated template and they can charge several items at the same time. Patron self-discharging shifts that work from staff to patrons. Staff is relieved further when readers are installed in bookdrops.

3. High reliability:

The readers are highly reliable. Some RFID systems have an interface between the exit sensors and the circulation system to identify the items moving out of the library. Were a patron to run out of the library and not be intercepted, the library would at least know what had been stolen. If the patron card also has an RFID tag, the library will also be able to determine who removed the items without properly charging them. This is done by designating a bit as the "theft" bit and turning it off at time of charge and on at time of discharge.

4. High-speed inventorying:

unique advantage of RFID systems is their ability to scan books on the shelves without tipping them out or removing them. A hand-held inventory reader can be moved rapidly across a shelf of books to read all of the unique identification information. Using wireless technology, it is possible not only to update the inventory, but also to identify items which are out of proper order.

5. Automated materials handling:

Another application of RFID technology is automated materials handling. This includes conveyor and sorting systems that can move library materials and sort them by category into separate bins or onto separate carts. This significantly reduces the amount of staff time required to ready materials for reshelving. Given the

high cost of the equipment, this application has not been widely used.

Disadvantages of RFID Systems:**1. High cost:**

The major disadvantage of RFID technology is its cost.

2. Vulnerability to compromise:

It is possible to compromise an RFID system by wrapping the household foil to block the radio signal. It is also possible to compromise an RFID system by placing two items against one another so that one tag overlays another. That may cancel out the signals. This requires knowledge of the technology and careful alignment.

3. Removal of exposed tags:

The RFID Tags can not be concealed in either spine or gutter of the books and are exposed for removal. If a library wishes, it can insert the RFID tags in the spines of all except thin books, however, not all RFID tags are flexible enough. A library can also imprint the RFID tags with its logo and make them appear to be bookplates, or it can put a printed cover label over each tag.

4. Security feature :-

The same RFID tag used to manage inventory can also be used to protect it from theft. Current offerings provide the choice between a purely RFID solution, or RFID with an EM (electro-magnetic) add-on for theft.

5. Tag memory capacity:-

More memory is not necessarily better than less - it often correlates with price, and data transmission speed. As a first step, consider what information you need to program into each tag, and then discuss with vendors.

Conclusion

RFID technology is not only emerging but also more effective, convenient and cost efficient technology in library security. This technology has slowly begun to replace the traditional bar-code on library items. The RFID tag can contain identifying information such as a book's title or material type, without having to be pointed to a separate. The information is read by an RFID reader, which replaces the standard barcode reader commonly found at a library's circulation desk. The RFID tag found on library materials. It may replace or be added to the barcode, offering a different means of inventory management by the staff and self service by the borrowed. It can also act as a security device, taking the place of the traditional electromagnetic security strip. And not only the books, but also the membership cards could be fitted with an RFID tag. The cost of the technology is main constraint.
